Professional Summary

Data science and software engineering professional with experience in industrial analytics, machine learning, and web automation. Skilled in Python, C++, and modern frameworks such as Vue.js and Angular. Experienced across both research and industry settings, with a proven ability to design, develop, and deploy scalable data-driven applications.

Technical Skills

Programming Languages: Python, C++, JavaScript, Java, Kotlin
Frameworks & Tools: Angular, Vue.js, Node.js, React, Docker, Git, Power BI
Data Science & ML: NumPy, pandas, scikit-learn, PyTorch, TensorFlow, PySpark
Cloud & Big Data: Google Cloud Platform, Apache Kafka, Apache Flink
Other Skills: Deep Learning, LLMs, Generative AI, Computer Vision

Work Experience

Student Assistant — Institute of Production Management and Technology Feb 2025 – Present

- Specializing in industrial analytics, machine learning, and web automation.
- Developing the frontend for a work order automation system using Vue.js to streamline order tracking and coordination.
- Collaborating with backend developers and domain experts to design intuitive UI components that support real-time data analysis.

Technologies: VueJS, Python, MongoDB, Docker

Associate Software Engineer — Bosch Global Software Technologies Jul 2023 – Sept 2024

- Implemented and optimized location search functionality for automotive infotainment navigation systems.
- Identified, resolved, and documented issues related to data accuracy and search performance.
- Conducted extensive testing and debugging of navigation features, collaborating with software, hardware, and UX teams.

Technologies: C++, SQLite, Visual Studio, Qt

Project Trainee — Bosch Global Software Technologies Jan 2023 – May 2023

- Optimized map search algorithms to reduce processing time by analyzing and refactoring legacy code.
- Conducted algorithm testing on infotainment systems to verify reduced latency in location search.

Technologies: C++, SQLite, Visual Studio, Qt

Projects

Federated Sentiment Analysis Apr 2025 – Jul 2025

- Designed and deployed a real-time sentiment analysis pipeline using Reddit data.
- Integrated Apache Kafka and Flink for streaming ingestion and analysis.
- Containerized and deployed the system on Google Cloud using Docker for scalability.

Technologies: Apache Kafka, Apache Flink, HTML, CSS, JavaScript, Docker, Google Cloud Platform (GCP)

Debiasing TextVQA Jan 2022 – Jul 2022

- Developed a debiasing model for TextVQA by integrating external datasets for improved fairness and robustness.
- Used the VQA dataset as a normalization reference to mitigate dataset-specific biases.

Technologies: PyTorch, Python, Computer Vision

Visual Question Generation Aug 2021 – Jan 2022

- Implemented a transformer-based model for generating questions from images using ViLBERT architecture.
- Trained and evaluated the model on the VQA dataset to assess generation quality.

Technologies: PyTorch, Python, Computer Vision

Education

Hamburg University of Technology (TUHH) 2024 – Present (Expected 2026)
Master's in Data Science

K.L.E Technological University 2019 – 2023
Bachelor's in Computer Science and Engineering

Languages

English (C1) — German (A2) — Kannada (Native)
